

{somemorecode}

Berlin, January 26th 2016 Somemorecode releases Page Booth 2.0. With its flag ship product, **Somemorecode offers an easy to use website screenshot tool for Mac OS X. Full page images of any website** can be grabbed and stored in the Page Booth library. All snapshots **can be exported to jpeg, png and tiff image formats.** Get more information and images on our [website](#).

Responsive view modes are build in - switch to popular mobile device views with just one click. Sandbox-aware **support for local websites** will boost your productivity in new projects and existing local code bases. With **Quicklook/Preview integration**, browsing the **Page Booth library** is super easy. This latest version of Page Booth combines a streamlined user experience with completely reworked art work.

Page Booth is **perfect for all web designers and developers** who need to show complete pages to colleagues and customers upfront or who simply want to take **snapshots of the evolution of a page design.**

Page Booth 2.0 is available for 4.99 and can be downloaded from the [Apple App Store](#).

If you are interested in testing and journalistically covering Page Booth 2.0 please contact us via [Email](#). If available, a promotional code will be sent to you.
